

Jenkins Activity 1.2

- Taking the first job, create a second job with this instructions:
 - a. Take the build from previous job
 - b. Execute the build and check the result

Graphic evidence:

The screenshot displays the Jenkins web interface. At the top, the Jenkins logo and a search bar are visible. The user 'Ana Margarita Garcia' is logged in. The breadcrumb trail shows 'Dashboard > test-2nd-job >'. The left sidebar contains navigation links: 'Back to Dashboard', 'Status', 'Changes', 'Workspace', 'Build Now', 'Configure', 'Delete Project', and 'Rename'. The 'Build History' section is expanded, showing a search bar and a 'trend' dropdown. The main content area is titled 'Project test-2nd-job' and contains a description in Spanish: '2.1 Tomar la build creada en el job "test-1rst-job" 2.2 ejecutar el comando java-jar MyJarCalculator.jar usando la build generada.' Below this is a 'Permalinks' section with a list of links to previous builds. The 'Configuration' section is also visible, showing a list of tabs: 'General', 'Source Code Management', 'Build Triggers', 'Build Environment', 'Build Steps', and 'Post-build Actions'. The 'Build Steps' tab is selected, showing a single step named 'Execute Windows batch command'. The command field contains the following text: 'cd C:\Users\am.garcia\.jenkins\workspace\test-1rst-job\src\n java -jar MyJarCalculator.jar'. There is an 'Advanced...' button and an 'Add build step' button at the bottom.
